

Microblading Aftercare Instructions

The day of Treatment: ABSORB

First thing after your Microblading procedure, your brows may feel tender or raw - this is normal. For the first 24 hours, please use the bottled saline in your aftercare packet to gently rinse your brow area and pat dry (do not rub) with sterile gauze. Do not apply any type of soap or cleanser. Do not rinse brows once 24 hours has past, in order to let your brows dry out and begin healing.

Gently blot the area with gauze to absorb excess lymph fluid. Do this every 5 minutes for the full day until oozing has stopped. Removing this fluid prevents hardening of the lymph.

Days 1-7: WASH

Wash daily to remove bacteria and dead skin. (Don't worry...THIS DOES NOT REMOVE THE PIGMENT!)

Gently wash your eyebrows each morning and night with water and an antibacterial soap like Dial Soap, Cetaphil or Neutrogena. With a very light touch, use your fingertips to gently cleanse the eyebrows. Rub the area in a smooth motion for 10 seconds and rinse with water ensuring that all soap is rinsed away. To dry, gently pat with a clean tissue. **DO NOT** use any cleansing products containing acids (glycolic, lactic, or AHA), or any exfoliants.

Days 1-7: MOISTURIZE

Apply a rice grain amount of aftercare ointment with a cotton swab and spread it across the treated area. Be sure not to over-apply as this will suffocate your skin and delay healing. The ointment should be barely noticeable on the skin. Never put the ointment on a wet or damp tattoo.

This can be done once at night time, but be sure to use the ointment sparingly as your skin needs to heal itself. Please continue to apply the ointment for 7 days.

The following **must be avoided** during all 14 days post-microblading procedure:

- Increased sweating
- Practicing sports
- Swimming
- Hot sauna, hot bath, or Jacuzzi
- Sun tanning or salon tanning
- UV/UVA Rays or chemicals as they have been known to cause a shift in color and premature fading
- Any laser or chemical treatments or peeling, and/or any creams containing Retin-A or Glycolic acid on the face or neck
- Picking, peeling, or scratching of the micro pigmented area in order to avoid scarring of the area or removal of the pigment
- Performing tasks related to heavy household cleaning such as garage or basement cleaning where there is a lot of airborne debris
- Drinking alcohol in excess, as it may lead to slow healing of wounds
- Driving in open air vehicles such as convertibles, boats, bicycles, or motorcycles
- Touching of the eyebrow area except for when rinsing and applying the post-care cream with a cotton swab

Please wash your face carefully around the eyebrow without getting water on the treated area. During the shower, keep your face away from the showerhead or take a bath. Itching and flaking may appear during the first seven days post-microblading procedure. However, experience has shown that by following these after-care instructions, these symptoms may quickly disappear.

If you have any unexpected problems with the healing of the skin, please contact MicroBROW Artistry immediately, to discuss further instructions.

CONTACT A PHYSICIAN IF ANY SIGNS OR SYMPTOMS DEVELOP SUCH AS THE FOLLOWING: FEVER, REDNESS AT THE SITE, SWELLING, TENDERNESS OF THE PROCEDURE SITE, ELEVATED BODY TEMPERATURE, RED STREAKS GOING FROM THE PROCEDURE SITE TOWARDS THE HEART, AND/OR ANY GREEN/YELLOW DISCHARGE THAT IS FOUL IN ODOR.

WHAT TO EXPECT DURING AND AFTER YOUR MICROBLADING SESSION

Entire healing process will take from 4-6 weeks depending on your body regeneration and age. Your new temporary eyebrows will go through several phases during the healing cycle.

The pigment will appear very natural looking immediately after the procedure. The color of the pigment will appear much darker the next day.

Note that because of natural skin regeneration, after recovery period (peeling), brows might appear lighter than original. This might give you the impression that color is fading too quickly. Often even with proper care, customer develop bald spots or lose original hair stroke which make brows look uneven. It is absolutely normal. That's is the reason why most customers need a touchup after 6 weeks.

Once the healing of the skin starts taking place, it will look like dandruff flakes or dry skin. However, this is just superficial color and dry skin being naturally removed from your eyebrows. The final look of your eyebrows will be apparent approximately 30 days after your procedure.

Never rub the treated area as it will disturb the skin from natural healing.

Once completely healed, always apply a layer of sunscreen SPF 30 up to SPF 50 on your eyebrows when exposed to the sun. Sun exposure might cause the color pigment to fade away more quickly.

When using foundation, be aware when applying to avoid your healed eyebrows. If foundation covers healed brows, your eyebrows will appear lighter.

You can now enjoy your beautiful new micropigmented eyebrows. You will simply love your new gorgeous fresh look!
